## Questionable Paragraph #3

**Direction:** Rewrite the following paragraph to correct spelling, grammar and sentence structure errors.

The overwintering habits of northeastern birds is critical to there survival in are region not all birds fly south for the winter. Birds that stay must get enough food, protection from the cold to live, how do they do this? During the day, they search fur foods highest in fat, like seeds and suet. Their body than burns these stored fats during the night to stay warm; through the frigid nights they trap their body heat between their fluffed feathers small birds like chickadees reduce their body temperature by 15 degrees F at night so they can conserve their fat stores from the day.

# Questionable Paragraph #4

**Direction:** Rewrite the following paragraph to correct spelling, grammar and sentence structure errors.

april is the time to be watching for the black spotted salamander Its name came from the two rows of yellow spots that track along its black back. This is a big salamander; 7 to 9 inches long that can live 20 years in the wild! So why haven't you saw one of these hudge salamanders from the mole salamander family? They spend a lot of they're lives living a few centimeters to 4 foot under-ground. Spotted salamanders come out of hibernation during the first rainy evenings in spring that reach 50 degrees F which in the northeast is usually April. April is breeding time and they head for ponds to lay there eggs and is the best time to catch a glimpse of them bring a flashlight.

# Questionable Paragraph #6

**Direction:** Rewrite the following paragraph to correct spelling, grammar and sentence structure errors.

Growing your own plants is easy. Whether you are growing flowers or vegetables, you don't need fancy equipment, you can use items from your home. Take a gallon milk jug and cut it in half removing the handle and spout. Wash this well with soap and hot water. Fill this with soil, and gently moisten the soil. Mark the jug with what you are growing. If your seeds are tiny just place them on top of the soil, if they are large, bury them two times the size of the seed under the soil. Cover the milk jug with plastic wrap to create a humid environment for the seeds to germinate. Once the seeds begin to grow move to a sunny window. They can be transplanted to pots after they get their first set of true leaves.

# Questionable Paragraph #8

**Direction:** Rewrite the following paragraph to correct spelling, grammar and sentence structure errors.

The Grate Lakes in new york state are fed by raindrops from miles away. Every time it reigns, the earth soaks up precipitation and the excess water flows, by gravity, to the lowest place if you are on a hilltop during a rainstorm, you can watch how the water slides down indentations in the earth to a lower point. This water eventually flows into a small steam these streams now have enough water to flow to small creeks these creeks all run together until they meet larger rivers. The Genesee River collects water from many small streams and creaks, called tributaries, and this water is then collected in Lake Ontario, a part of the Grate Lakes system.

# Questionable Paragraph #9

**Direction:** Rewrite the following paragraph to correct spelling, grammar and sentence structure errors.

Hunny bees are super-important pollinators for flours, fruits and vegetables. Bees transfer pollen between the mail and female parts of plants. One queen runs the hole hive her job is to lay the eggs that will spawn the hives next generation of bees. The queen also produces chemicals that guide the behavior of the other bees. Worker bees are all female and their rolls are to forage for food, build and protect the hive, and circulate air by beat their wings. Workers are the only bees people ever see flying around outside the hive drones are the mail bees, and there purpose is too mate with the new queen several hundred live in each hive during the spring and summer. Come winter when the hive goes into survival mode the drones are kicked out!

# Questionable Paragraph #11

**Direction:** Rewrite the following paragraph to correct spelling, grammar and sentence structure errors.

The aire was hot and humid and the pavement is black and glistining from the recent rain. The moon peeked threw the clouds and highlighted the dense fog the way ahead was marked by yellow lines that were three to four steps in length. The fog enshrowded everything as the steps were measured and counted. Perhaps they were the only person left in this quite midnight world with it's soundless, scentless, sightless ways. Perhaps they weren't.

# Questionable Paragraph #15

**Direction:** Rewrite the following paragraph to correct spelling, grammar and sentence structure errors.

The bald eagle, with its snowie-feathered (not bald) head and wite tale, is the proud national bird symbol of the United States—yet the bird was nearly wiped out their. For many decades, bald eagles were hunted for sport and for the "protection" of fishing grounds. Pestisides like DDT also wreaked havoc on eagles and other birds these chemicals collect in fish, which make up most of the eagle's dyet they weaken the birds eggshells and severely limit there ability to reproduce. Since DDT use was heavily restricted in 1972, eagle numbers have rebounded significantly and have been aided by reintroduction programs
